Research Paper / Article Writing

Dr. Sanjay Bhedekar

Mahia Mahavidyalaya Georai Dist. Beed

Education system in India has grown leaps and bounds since independence and has broadened its objectives with a well-designed curriculum. It broadly aims to impart knowledge develop skills, inculcate values and more importantly, build character and spirit of nation building which in turn promotes an all-round personality development of human beings. The Delores commission (1996) report had proposal an integrated vision of education based on two key concepts viz learning throughout life and the four pillars of learning.

1. Learning to know : academic base ; reading and numeracy; comprehension and ability to research and analyses.
2. Learning to do: Skills, Capacity to act and ability to apply knowledge.
3. Learning to live together; communications; conflicts resolution; cultural sensitivity and multi - lingualism.
4. Learning to be: self-esteem; emotional intelligence; critical thinking and cultural awareness. These four pillars of education are recognized as fundamental principles of reshaping the 21 st century education.

Now a day it is highly recognized that the educational institutions need to develop employ ability skills in students through a class room teaching learning process and skills development has now become one the major objectives of education. In order to accomplish this objective effectively, teachers and students have to enhance their reading habits and they have to continuous learners. Great Educator and philosopher, Dr. Ravindranath Tagore said that " A teacher can never treaty teach unless, he is still learning himself. A lamp can never light another lamp can never light another lam unless it continues to barn its own fame." Writing and publishing a quality research paper is recognized publishing a quality research paper is recognized as one of the best means to promote a continue learning and shoeing knowledge with others. Teaching, learning, research and publication are the core activities of teachers who are teaching the different educational institutions right from K.G to P.G The reaches, irrespective of whether they teach in schools, college and P.G departments of universities need to be encouraged writing and publishing research papers on a different releart socio economics issues like food habits and their effects how to develop reading habits.

The successful any research paper writing lies more in the ability and innovation of the research scholar in terms of identifying a better and newer means and methods of carrying out research.

Writing a Research Paper; Different types of Issues: Instant Writing and Publishing:

Good research paper writing on any chosen topic certainly needs a sufficient time and it would be rather diffident to write a quality paper in a very short span of time. Firstly writer has to mentally prepare the format of paper in his/her mind to write a paper. A writer has to

deplore the subject theme, sub theme, focused topic and the type of paper Rs like a case study based survey based, current issue based, data based. A writer has to be focused and start working on chosen topic, so many times, we instantly divided to write a research paper because we receive a brochure from different educational instigations, incautious a research paper for presentation at national/ international conference/ seminars/ workshops. A teacher gets motivated, because the organizers of conference/ seminars assure that the same paper will be published in ISSN numbered /UGC listed Journals.

Linking and Involvement:

Linking and an involvement of a teacher in writing and publishing a research paper is another is another important key factor that contributes to a better quality of paper. A strong will power thinking, concentration, company, hard work, patience and sacrifice are some of the qualities of a good writer. We some time say that, we are interested but, we don't have a time because of a busy schedule, it could not be possible to write a paper. In this context it is rightly said that, "Where there is a will there is a way." Which means that if someone is determined to do something he / she well find a way to accomplish the undertaken tark regardless of obstacles. If someone is hat willing of learn, no one can help him/ her. If someone is determined to learn, no one can stop him/ her. Many times, we write a paper hurriedly without any linking, writing a paper just for the sake of writing.

Involvement in writing a research paper means, anybody reads the research paper, the reader should feel the preserve of the writer throughout the paper. The readers must enjoy reading of the paper which is integrated with several feelings, thought and intellectual expressions of a writer. There is a different between 'hearing' and 'listening' involvement is like listening which requires counteraction and understanding sometimes, a research paper is writing without a writer being involved in the actual process of writing, just by compilation and dissemination of information / fact/ figures. Lack of living and involvement could be one of the reasons which will certainly deteriorate the quality of research paper.

Approach of Research Methodology:

The success of any research is depends upon two important components. Setting relevant and researchable objective and developing a scientific research methodology to accomplish the set research objectives. A methodologically designed research. A can be considered as a piece of scientific research. The research output are judged and graded on the basis of research objectives and the methodology is stronger and scientific, the research output would be equally strong and useful. Thus the research methodology employed for the study plays a vital role in assuring a success of research study. Research methodology simply means the different methods that are employed to accomplish the set research objectives. The term methodology id broader than research methods and techniques methodology includes research methods and techniques bat, research methodology does not necessarily include methodology.

Analysis and Interpretation:

Analysis and Interpretation of a collected qualitative and quantitative data is another

important step in research. Analysis is the process of splitting, dividing a have data into a smaller groups based on the homogeneity and similarity in the behavior of data and established a logical relationship between and among the classification data groups. The collected huge absolute data do not convey and meaning unless and until they are related with another set of data eq. The total no of computers available in the lab of a degree college gives hardly any meaning unless they are related with another data variable ie the total no students.

This conveys some meaningful message to the readers. Comparably, the total net profit earned by a company in one financial year does not give any significant meaning, unless it is related with another variable ie total sale made for the corresponding year. (profit to sale ratio)

Simplicity, clarity and connectivity of paper writing:

Simplicity, clarity and connectivity are other most important requisites of a good research paper. One of the key objectives of writing a research paper is to share a new knowledge / information with people across different sections of the society. If the readers at large do not read and understand the content of the paper, then the very purpose of writing a research paper is defeated. A writer needs to write a paper in such a way that readers at large understand and appreciate research paper. The writer needs to concentrate right from framing the title of the research paper till the conclusions and suggestions. The title of the research paper should be reader friendly and it should take readers to the content of the paper.

The writer needs to ensure a proper linking connectivity among research issues, a research assumptions, research objectives and finally research findings. It means whatever research issues are raised and the same issues should be reflected in assumptions and the assumptions should be reflected in the objectives and finally the accomplishment of objectives should be seen in research findings. For example, if the writer selects the topic as 'Reading Hobbit's' of students in select high schools in a taluka, research issues raised are what reading habits do students have.

Conclusion & Suggestions:

Conclusion & Suggestions are the most significant part of a research paper. Conclusion are the end product of the research which is carried out by the researcher for writing a paper. Suggestions are the fruitful / relevant solid ions to the problem based on the research. Readers are more interested in knowing the research methods and importantly findings. The paper writer has to satisfy reader's expectations. Writing conclusions and making realistic Suggestions needs a special attention. If these are not properly written, the whole research paper loses its impotence. Hence a paper writer has to ensure a specific conclusions and Suggestions in the research paper. For example, if the scholar studies the research problem like current and passed out students progression of a degree college."

Conclusion:

Writing research paper is one of the important academic writings and writing a quality research paper is essential to enhance its utility and usefulness to readers, Research Paper

writing would obviously benefit teacher/ Writers in many ways like. Self- satisfaction and feel of enrichment, academic achievement drafting and communication skill, convincing ability, widening knowledge base; command and confidence over the subject ; significant of inquiry ; originating new ideas ; analytical who ; patience and many others. These skills and qualities can be well inculcated in students through class - room teaching learning process. The different issues and innovational discussed in this paper would surely enhance the quality of research paper.
